

WRAPCRAFT

The lean solution for top-wrapping pallets

The top-wrapping method contains plenty of advantages to conquer a relevant market share.

Compared to all other top-covering methods the added values are:

- lowest possible investment cost
- lean top-covering with the very same film used on any other stretch-wrappers
- most simple principle – less maintenance needed
- no need to handle heavy top-film reels
- no need to stop to lay the cover sheet – save direct labour cost&time with semi auto wrappers top-covering at one single wrapping run
- no need to store another packaging material
- adds a massive holding force to the top layer – vital for unstable products (PE, PP bags, shrinkwrapped bottles, etc) – saves on transport damages
- same footprint as any other stretch-wrappers – no additional equipment to be invested, installed and maintained
- all customizable – patterns, savings, stability, speeds – the ultimate method to take care of your valuable product up to 45 pallets/hour.
